Helper utility device  
by Turn2on Software

Most studios include one or more multichannel audio interfaces with many devices routed to the DAW.

Mixers, Audio Interfaces, ADAT interfaces - all of them have connected devices. It is often difficult to remember what ports of these devices are assigned in order for proper input and output to/from the DAW.

REASON as a DAW - includes its own good familiar HARDWARE INTERFACE. 16 audio I/O by default.

We still need to remember what instruments or effects are connected to the I/O ports of the audio interface and also how channels of the interface are routed to the Reason Hardware I/O.

Some musicians (producers / engineers) physically mark the names of used devices on their hardware rack (with stickers or tape) along with Audio Interface I/O and DAW channel info. This is a nice solution for Gigs and studio work.

Presenting the **INFOBAY OUT** device, an interface helper utility that allows you to similarly place labels to keep track of outputs in the Reason rack.

**REASON OUT:** Set the digits of Reason Output channels (as mono or stereo pairs)

**HARDWARE OUT:** Set Channel digits of Audio interfaces outputs (multiple interfaces)

**OUT TO THE DEVICE:** Set names of connected devices to the Reason Outputs

**DEVICE TYPE ICON:** Use devices icons to identify connected devices at a glance

All info from the Front panel is duplicated on the Rear and Folded panels.

Enter custom info into the 16x4 table about channels of the Reason Outputs as well as output ports of multiple Audio Interfaces.

**INFOBAY OUT** Rack Extension provides virtual labels for Audio Outputs using digits for routing channels, as well as names and icons of the connected devices.

With **INFOBAY OUT**, there is no longer a need to remember all of the routing info with channel digits and device names.

# FRONT & REAR PANEL

## FRONT / REAR PANEL INFO LINES

<b>REASON OUT</b>	Set the digits of Hardware Outputs (as mono or paired stereo channels). By default 1-16
<b>HARDWARE OUT</b>	Set digits of the Audio Interface Output ports (as mono or paired stereo channels)
<b>TO THE DEVICE</b>	Set the name of the connected device
<b>DEVICE TYPE ICON</b>	Set the Icon of the connected device type

Both the FRONT and REAR panel of this device includes the same info. This allows for use in both the FRONT and REAR rack mode.

# FOLDED PANELS

## FOLDED PANELS INFO LINES

<b>REASON IN</b>	Set digits of Hardware Outputs (as mono or paired stereo channels). By default 1-16
<b>HARDWARE IN</b>	Set digits of the Audio Interface Output ports (as mono or paired stereo channels)
FROM DEVICE	Not available on the folded panel
DEVICE TYPE ICON	Not available on the folded panel
