JANUS

2X ANALOG PHASER

Thank you for choosing Janus 2X Phaser!

Janus 2X Analog Phaser combines two great sounding phaser circuits in one box. Both can be set to either 6 or 8 poles. Depth, Feedback and Center Frequency can be modulated via the CV connections on the back panel. Phaser 2 has inverted feedback polarity for a different sound character.

Spreading will spread the signal in the stereo field. The amount of stereo spreading is dependent of the Depth amount.

Use a flat-blade screwdriver to adjust the Center Frequency and CV trimknobs.

SPECIFICATIONS

Dual Phaser

2x 6/8 Poles Phaser circuits

Feedback and Inverted Feedback

Rate (0,1 - 8Hz)

CV connections: Feedback, Depth, C.Freq x2
